Subject: DSP3.6 Mapping

Good morning.

Currently the mapping tool has dedicated layers for most of the DSP3 grazing practices. With the recent addition of the DSP3.6 Native Warm Season Forage practice we do not currently have a layer specific to that practice. Until that layer and the practice can be added to the program drop down field for options to the mapping tool, we are asking for the System Acre layer feature be used to reflect acres served for the contract. When filling out the fields in the layer leave the practice option blank as the 3.6 will not be an option and put a note on the MOSWIMS contract stating the "system acres layer is being used to reflect acres served" and in the comments field on the map layer with "3.6" stated.

We do hope to update the mapping tool to reflect this additional option soon.

Any questions please contact your coordinator. Thank you.
