Missouri Regional Conservation Partnership Program Projects Announced

Missouri to Host 2015 National Envirothon

Perry County SWCD Hosts Beef Facility Tour

Missouri Beef Summit held in Columbia

Plan for the Future Committee meeting held Jan. 21 in Jefferson City Missouri Regional Conservation Partnership Program Projects Announced Our Missouri Waters Targeted Conservation is one of five Missouri projects among the more than 100 high-impact conservation projects announced by Agriculture Secretary Tom Vilsack as part of the new Regional Conservation Partnership Program (RCPP).

The Our Missouri Waters Targeted Conservation Project, lead by the Missouri Department of Natural Resources will use an existing effort, Our Missouri Waters, to further implement the wise, cost-effective installation of farm practices in basins throughout Missouri. Our Missouri Waters provides an effective water resource framework that values local leadership and provides technical and financial assistance to aid locals in solving natural resource problems. The project will also support implementation of the Missouri Nutrient Loss Reduction Strategy beginning in 2015. The primary goals of this project will be maximizing improvements in water quality and wildlife habitat.

Through partner agreements this project will measure practice effectiveness through stream monitoring, edge of field monitoring and a nutrient tracking tool to compare nitrogen and phosphorus load reductions.

"RCPP puts our partners in the driver's seat," said J.R. Flores, state conservationist with the USDA's Natural Resources Conservation Service (NRCS). "Projects are led locally, and demonstrate the value of strong public-private partnerships that deliver solutions to tough natural resource challenges." This year's projects in Missouri will accomplish a wide diversity of agricultural and natural resource goals," said Flores.

"To make this grant successful it will take the work of our local soil and water districts to ensure we are marketing the effort to bring additional cost-share money Missouri landowners as well as

technical assistance and monitoring." said Sara Parker Pauley, director of the Missouri Department of Natural Resources.

The other four Missouri projects include:

Vorthwest Missouri
Urban and Rural
Farmers United For
Conservation - Lead
Partner: Jackson
County Soil and
Water Conservation
District. This project
will focus on issues
that affect both rural

People 10 Land Process and Control of the Control o

will focus on issues that affect both rural farms and smaller urban farms.

DNR director Sara Parker Pauley and NRCS state conservationist J.R. Flores sign the RCPP Our Missouri Waters award.

 Little Otter Creek Watershed Project - Lead Partner: Caldwell County Commission.

- Regional Grassland Bird and Grazing Land Enhancement Initiative - Lead Partner: Missouri Department of Conservation.
- Restoring Glade and Woodland Communities for Threatened Species in the Ozarks of Southeast Missouri -Lead Partner: Missouri Department of Conservation.

RCPP's historic focus on public-private partnership enables private companies, local communities and other non-government partners a way to invest in efforts to keep land resilient and water clean, and promote economic growth in agriculture, construction, tourism and outdoor recreation, and other industries.

RCPP is a 5-year \$1.2 billion USDA commitment. Projects not selected in this first year may be eligible in subsequent years. Visit for more information about Missouri's Regional Conservation Partnership Program Projects visit http://www.swcd.mo.gov/internal/rcpp/rcpp.htm.

Missouri to Host 2015 National Envirothon
Missouri will host the national Envirothon from July
27 through Aug. 2 at the Missouri State University in
Springfield. Missouri expects about 59 teams to come to the
event with approximately 500 students and teachers from the
U.S. and Canadian provinces participating.

Students work as a team in the field to find answers for questions about the soil at the 2014 Missouri Envirothon.

Reference materials for students and teachers are available through local soil and water conservation districts. These districts work with cooperating agencies, educators, community and interest groups to conduct regional competitions. The top three teams at the regional competitions advance to the state competition, to be held on May 1 in Jefferson City. The winning team represents Missouri at the national Envirothon.

Students answer written questions and conduct hands-on investigation of environmental issues in five categories including soils/land use, aquatic ecology, forestry, wildlife and current environmental issues.

In addition to a written test, the teams also present an oral presentation solving a specific natural resource issue. The continuing support of the Envirothon reflects the participation of multiple partners.

Volunteers are being recruited to help coordinate activities at the event. If you are interested in helping at the National Envirothon, please contact Peggy Lemons at 573-893-5188, ext. 3.

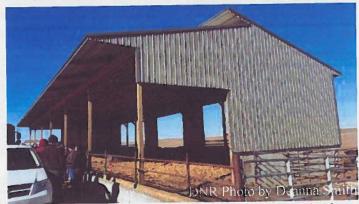

Perry County SWCD Hosts Beef Facility Tour
The Perry County Soil and Water Conservation District held
a field day on Jan. 21 for area landowners to tour the counties
first two completed Beef Manure Management Facilities
installed using cost-share approved through the Perry County
Soil and Water Conservation District.

Approximately 56 participants learned about the facilities from the landowners as well as Perry Country SWCD technician LaVern Taylor and NRCS engineer Mark Nussbaum.

The purpose of these facilities is to manage manure from beef production to prevent or minimize degradation of soil and water resources. While the specific design of the building is suited to number of animals and needs of the landowner, all facilities have both a feeding and manure storage area.

Through winter months, hay and other feed supplements are provided to beef cattle in the building. As manure builds up, it is pushed into the manure storage area of the building. The stored manure is eventually applied to return nutrients to the landowner's grazing acres following a required Comprehensive Nutrient Management Plan.

The Perry County Soil and Water Conservation District held a tour day to visit two beef facilities built using costshare funds in 2014. Pictured is a stocker facility.
